Every person earning in an online business knows that generating traffic is one of the most important thing you have to do for your website. For high traffic generation, you must handle multiple methods of traffic generation. I do not believe you can simply rely on one method of traffic generation no matter how good that method of traffic generation is. One of the worst things to happen is when you depend on one source of traffic, and that source of traffic falls apart. Therefore, you need multiple methods of generating traffic. So what are the top five methods of traffic generation? 1. The first way of generating traffic is article marketing. What do you mean by article marketing? Article marketing means, writing articles and submitting them to article directories, with links to your

website. Article marketing seems to be the trend of the hour for traffic generation since it has been proven as one of the wisest methods that can generate traffic and most importantly with little or no financial expense. 2. Blogs are the second way of earning traffic, the main advantage of this is, you can interact with people on an individual basis, and blogs have been proven more emotionally appealing to the reader than any other method for traffic generation. RSS feeds have taken blogs to another dimension by delivering information to readers with the latest updates. 3. Forums are the third way of attracting traffic, because, it helps to build trust with other members and allows you to build traffic to your site. If you really want to generate constant traffic to your site, you would do well to join forums and learn how to submit posts there. What is more, it would teach you about a number of new and different things and would make you aware of fresh thoughts and ideas. 4. Search engine optimization is the fourth method of traffic generation. What is search engine optimization? Search engine optimization is the process of optimizing your own webpage in such a way that the search engines recognize your webpage for your given keywords. 5. The last but not least way of generating traffic is using videos. Make short and instructional videos and submit them to video sites like Youtube, Yahoo, and Google etc. Don't forget to add your links in the videos. These are some easy ways to attract traffic, which I like to share with you all. By following these proven five simple strategies, you will definitely get a fat lot of traffic to your site.
